BIRD STOP

VISUAL AND OLFACTORY BIRD REPELLENT

**A DISCREET, NON-HARMFUL AND HIGHLY EFFECTIVE
BIRD REPELLENT FOR USE ON BUILDINGS AND
OTHER STRUCTURES.**

HOW IT WORKS

BIRD STOP works on the birds three main senses:

**100%
NATURAL &
PESTICIDE
FREE**

SIGHT

BIRD STOP uses our Flame Shield Gel Technology^(tm) to reflect light (sparkles) in the UV-spectrum. Since birds see light in the UV-spectrum, the sparkle resembles flames. This virtual 'flame shield' visually deters the birds from landing.

SMELL

Contains herbal extracts in a natural product base. If the bird gets closer, it is repelled by the herbal odour.

SOUND

The bird will then sound a warning signal to other birds which provides additional auditory repellence.

A highly effective repellent for:

SEAGULLS
AND MORE

MYNAHS

PIGEONS

SPARROWS

BARN SWALLOWS

STARLINGS

Protect-us BIRD STOP is non-toxic and non-harmful to birds. Using our unique 'Flame Shield' formulation, it combines potent visual and olfactory effects to deter pest birds from landing on the structure. A significant benefit is the fact that the birds do not make any contact with the product.

Protect-us BIRD STOP is quick and easy to install. It is suitable for indoor or outdoor use and causes no damage to buildings or structures. It is formulated to be durable, even in the most exposed locations and is not adversely affected by wind, rain, snow or extremes of temperature.

If left undisturbed, BIRD STOP deterrent effect on birds is long-lasting. It will remain effective for at least two years after proper installation.

BIRD STOP works by affecting and altering a bird's behaviour, not by acting as a physical barrier. Birds will completely abandon a habitat, once BIRD STOP has been applied.

UNDENIABLY EFFECTIVE

A series of trials were undertaken to study the effectiveness of BIRD STOP Visual & Olfactory Bird Repellent on a range of common bird species. All trials showed 100% effectiveness in repelling these species from commercial and residential properties, in areas where they had been creating a serious nuisance for a number of years.

Trials included an untreated 'control' site to gauge the effectiveness of BIRD STOP in repelling the birds. In contrast to the trial sites, the control sites remained significantly affected by birds.

In each case, following placement of BIRD STOP Dishes at the protected sites, birds were immediately deterred from returning and roosting. The sites remain free of all birds. In contrast the control sites remain covered in large numbers of birds.

- Non-toxic visual & olfactory gel to deter pest bird species
- Effective for all pressure sites
- Low profile solution
- Dish accommodates gutter clips, window clips and magnets
- BIRD STOP does not contain polybutene
- Formulated with all ingredients meeting European Pharmacopoeia Standards

DISCREET AND EFFECTIVE

Low-profile application Dishes can be easily fixed in place with silicone, or attached to gutters and windows with magnets or clips.

Even when these Dishes are placed behind the leading edge of a parapet or ledge, they are still effective. Dishes are also invisible from ground level, thus preserving the aesthetic appearance of the building.
